Summary

AI Automation Engineer and full-stack mobile developer skilled in React Native, Node.js, Express.js, REST APIs, MySQL, and Firebase, with growing expertise in LLM integration and agentic AI. Built an end-to-end university transport management system and a deployed AI document-to-notes application. Seeking roles in AI Automation, AI Integration, and Intelligent Systems Development.

Core Skills

- **Mobile & Frontend:** React Native (Android), React Native Maps, Google Maps API, Google Places Autocomplete, Reverse Geocoding, Cross-Platform UI/UX
- **Backend & APIs:** Node.js, Express.js, REST API Design & Integration, Role-Based Authentication, OTP Password Reset, Session Management, Secure API Communication
- **Database & Cloud:** MySQL, Relational Database Design, Foreign Key Constraints, Firebase Authentication, Firebase Realtime Database, Cloud Services
- **AI & Automation:** Python, Streamlit, LLM Integration, Hugging Face Inference API, Agentic AI, Prompt Engineering, OCR (Tesseract), Document Processing, AI Workflow Automation
- **Tools:** Git, GitHub, Docker, Hugging Face Spaces, Android Studio, Visual Studio, Microsoft SQL Server, Debugging & Problem Solving

Professional Experience

Front-End Developer Intern — ReownLogics, Lahore, Pakistan *May 2025 – Sep 2025*

- Learned HTML, CSS, and JavaScript fundamentals, then progressed to React JS to build interactive, component-based web interfaces.
- Practiced converting Figma designs into responsive web pages, first with plain HTML/CSS and later by rebuilding them in React JS as skills advanced; also learned React Native and built multiple mobile app screens from Figma as practice.
- Collaborated with the development team on real web-based projects, translating design requirements into functional, well-structured front-end components with strong attention to detail.
- Demonstrated a strong work ethic and consistently delivered high-quality, polished work throughout the internship.

Projects

AI Notes Generator (Agentic AI) *2026*
Python, Streamlit, Hugging Face Inference API, PyMuPDF, Tesseract OCR, Docker

- Built and deployed an agentic AI web app that converts PowerPoint, PDF, and image files into study notes, summaries, exam questions, and solved case scenarios using a hosted LLM (Qwen).
- Designed an agent that detects file type, routes to the correct text extractor, and selects the AI task; integrated Tesseract OCR to read scanned PDFs and images.
- Implemented document chunking to process large files and improve topic coverage, with graceful handling of API rate limits and errors.
- Containerized with Docker and deployed on Hugging Face Spaces using secret-based API key management.

AI Interview Coach Agent (Agentic AI) *2026*
Python, Streamlit, Gemini/Groq API, SQLite, ReportLab, Hugging Face Spaces

- Built a multi-agent platform that simulates technical and HR interviews, where specialized agents generate role-based questions, manage interview flow, evaluate candidate answers, and produce a final performance report.
- Integrated LLMs (Gemini/Groq) with prompt engineering to score responses on correctness, clarity, completeness, and technical accuracy, returning detailed feedback, ideal answers, and personalized improvement recommendations.
- Implemented SQLite-based session history and ReportLab PDF report generation; deployed on Hugging Face Spaces using free, open-source technologies.

UOL Transportation App (Final Year Project) *2025 – 2026*
React Native, Node.js, Express.js, MySQL, Google Maps API, REST APIs

- Built a full-stack transport management system for the University of Lahore with independent Admin, Student, and Driver modules covering fleet management, live bus tracking, transport requests, and attendance.
- Developed a RESTful Node.js/Express.js backend handling request lifecycle, automated driver assignment, scheduling, and real-time data delivery.
- Designed a normalized MySQL database (9+ tables) with foreign key constraints enforcing data integrity across all entities.
- Integrated Google Maps API, React Native Maps, Places Autocomplete, and Reverse Geocoding for stop selection, route visualization, and live tracking; implemented role-based auth with OTP password reset and secure sessions.

Education

MS in Artificial Intelligence Engineering — COMSATS University Islamabad, Lahore Campus *2026 – Present*

Bachelor of Science in Computer Science — The University of Lahore, Pakistan *2022 – 2026*
CGPA: 3.30 / 4.00

Languages

Urdu: Native | English: Fluent
